

The cloud-based web application  
for the administration and organization  
of members and resources  
in your church.

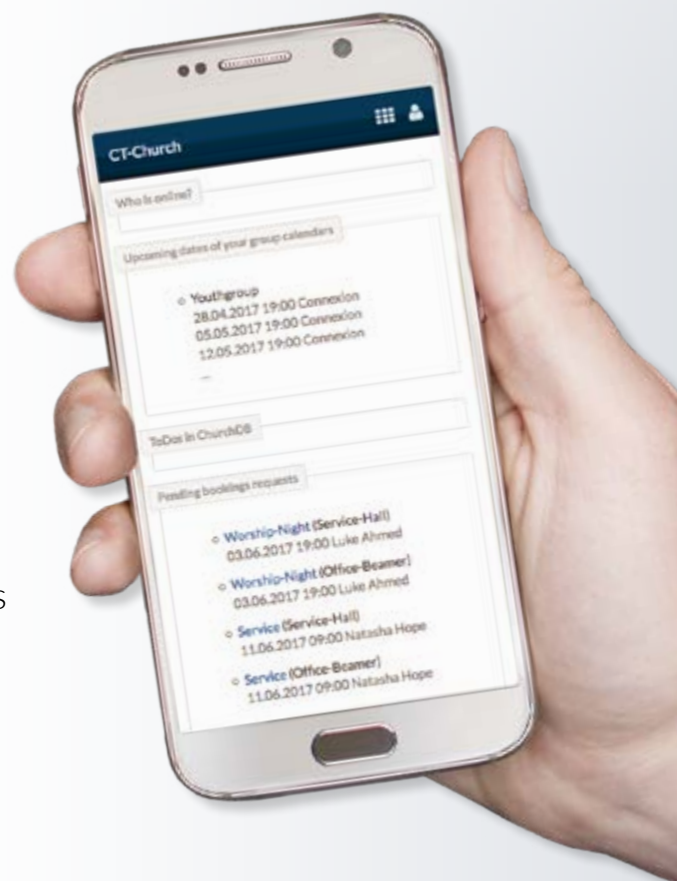

**ChurchTools** helps you organize your church – with ease!

Finally, a complete solution that meets your church organizational needs: with **six different modules** you can assign volunteers, manage groups, reserve rooms, schedule small groups and plan services and church events at the click of a button.

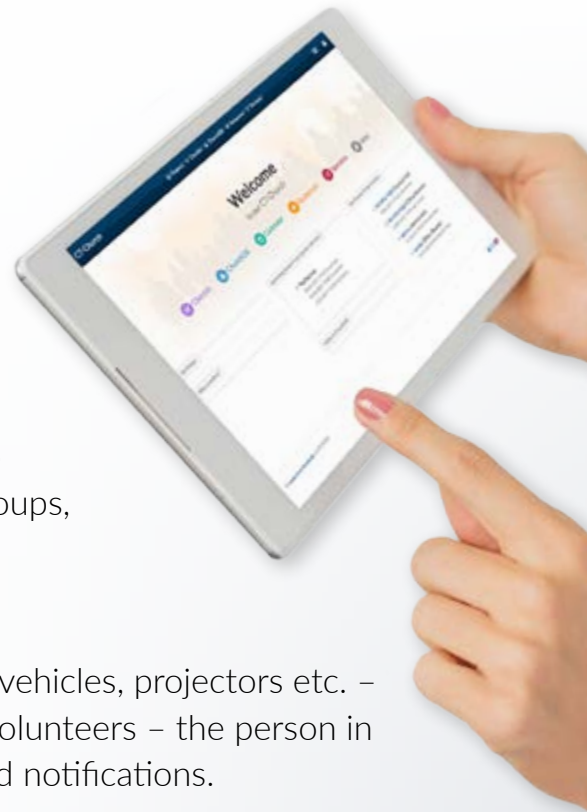

**More than 1.000 churches** are using ChurchTools. Through modern encryption techniques, daily backups and data regulations according to the highest industrie level standards we are keeping your sensitive church data safe.

**» Since we use ChurchTools,  
we start our services much more relaxed! «**

### ChurchDB

provides you with an address database to manage contacts and volunteers, their groups, services or small groups.

### ChurchResource

is a booking system for managing rooms, vehicles, projectors etc. – these can be reserved and approved by volunteers – the person in charge keeps an overview with automated notifications.

### ChurchService

allows you to easily organize events, schedule services, create flowcharts as well as manage the songs for the worship teams. Volunteers can accept, decline or suggest another person within their service requests.

### ChurchCal

is more than just a calendar: now you can keep your appointments and annual plans up to date. Rooms, equipment and events can easily be managed. You can integrate your church calendar into your website.

### Checkin

allows you to check in people to group meetings and events. A list of participants is automatically created and name tags can be instantly printed out. It also gives you an overview which child is present at children's services.

### ChurchWiki

gives users the ability to write articles, service instructions and procedures. Those files can be made available for download to all assigned ChurchTools members.

**ChurchTools** provides the integration to other online platforms and programs to manage songs (CCLI-SongSelect), send newsletters (MailChimp), song lyrics projection (ProPresenter, SongBeamer, OpenSong) and send short messages (via SMS provider and Telegram).
